MOTIVATION

- My name is Neolin Pachai and I am currently a third year software engineering student at Belgium Campus in South Africa. Next Year (2021) will be my final year for my BComp Software Engineering Degree. It is my practical year, in which I am required to do an internship at a company whilst concurrently completing my dissertation for that year.

- **Why I believe that I will be an invaluable asset to the your company:**
  - → I have a spirit of tenacity, which means that I do not know how to quit, I will sit with a challenge until it is solved.
  - → I am always open to correction and I love to learn from others and share with others my point of view. I believe that diversity & collaboration amongst people should be embraced and is key to solving any problem that may be encountered.
  - → I practise this concept every day of my life and as a SRC vice president of my university; I try to create a fresh and exciting environment where people from a diverse group can come together and accomplish anything.
  - → Examples where I practise this concept is my participation in the global hack the waste hackathon in my second year, where I had an amazing opportunity to work with students from around the world. The goal of this hackathon was for students to come together from different universities and specializations and work collaboratively in a 24 hour period to contribute a solution to a global waste problem.
  - → My project for this year is known as the Child Safety project and is from the University of Pennsylvania. This project includes working with a BMW located on sight and integrating with the code of the vehicle to provide functionality to users for increased child safety and monitoring of the vehicle when it is parked.
  - → The group working on this project is from the United States, Australia and South Africa and I have been very fortunate to have been chosen to lead this group.
  - → I love challenges and I believe that there is a solution to any problem. This is a fundamental concept that I have implemented when tackling any complex programming or work related tasks and has proven to me that nothing is impossible as long as you apply yourself and never give up!

→ I have a strong belief to go over and beyond what is expected of me to output the highest quality of work every time and I believe that you never ever stop learning, and that knowledge is an ongoing learning process that follows you throughout life. I practise this concept by giving my best at university and utilizing other resources such a Udemy to further develop my skills in my spare time for continuous learning.

→ Lastly; more than just work, I believe that you should always have a balance between your work and personal life. In my personal time, I love to read novels, play games online, have long walks exploring new places and taking part in sport events.

I sincerely hope that I meet your criteria as a student intern and I look forward to starting my career at your company !
